Examiner, Art Unit 3749

REASONS FOR ALLOWANCE

1. Applicant's amendment dated 10/4/2010 follows the suggested amendment offered by the examiner regarding independent claims 14 and 17 in the office action dated 4/5/2010 (see examiner's note), thus claims 14-22 and 25-27 are in a condition for allowance, and by way of the applicant's amendment dated 10/4/2010, claims 1-13, 23 and 24 are cancelled.
2. The following is an examiner's statement of reasons for allowance: The invention, "Installing a Solar Panel On a Roof" is in the field of installing and packaging solar panels, wherein packaging material of the solar panel is used for installment. The invention is defined as: A method of packaging solar modules for shipping, said method comprising: releasably positioning a plurality of first spaced shipping inserts into the trough of a first pan, wherein said first pan is used for installing at least one of the solar modules during use, said first pan comprising a length of a material having a trough-shaped cross-section which forms said trough; each of said first spaced shipping inserts having a plurality of parallel slots therein which align with said slots in the other of said first spaced shipping inserts to thereby effectively provide a plurality of parallel slots across said first pan when said first spaced shipping inserts are within said trough of said first pan, wherein each of said first spaced shipping inserts having a shape conformed to said trough, and each of said first shipping inserts position generally transverse to said length of said first pan; placing one edge of a solar module into each of said parallel slots in said first spaced shipping inserts; releasably positioning a plurality of second spaced shipping inserts into the trough of a second pan, wherein

said second pan is used for installing at least one of the solar modules during use, said second pan having the same construction as said first pan; each of said second spaced shipping inserts having a plurality of parallel slots therein which align with said slots in the other said second inserts to thereby effectively provide a second plurality of parallel, longitudinal slots across said second pan when said inserts are within said trough of said second pan, wherein each of said second spaced shipping inserts having a shape conformed to said trough, and each of said second spaced shipping inserts position generally transverse to a length of said second pan; and placing the opposite edge of each of said solar modules into a respective parallel slot in said second spaced shipping inserts to thereby, protect said edges of said module during shipping. The prior art of reference in a similar field are U.S. Patents 6065255 to Stern et al, 4353466 to Pater and 5164020 to Wagner et al. Stern et al teaches the use of installing solar panels on trough members that can be mounted on a roof, wherein the trough members have a V, U or W shaped cross section. Pater teaches a shipping crate utilizing inserts with slots in them in order to secure glass panels, i.e. automotive windshields. Wagner also teaches the use of trough members for the mounting of solar panels on a roof. The prior art of reference, alone or in combination do not show a method of packaging and shipping solar panels wherein the trough members along with inserts having slots are used to secure the solar panel in a crate-like member and the upon installation, the trough members are used to mount the solar panels, therein providing a benefit of utilizing all materials for multiple purposes. For these reasons, the invention is unique, and therefore patentable.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
